Sequence 5938, Application US/09134000C

Patent No. 6617156

GENERAL INFORMATION:

APPLICANT: Lyun Doucette-Stamm et al

TITLE OF INVENTION: ENTEROCOCCUS FAECALIS FOR DIAGNOSTICS AND THERAPEUTICS

FILE REPERENCE: 032796-032

CURRENT APPLICATION NUMBER: US/09/134,000C

CURRENT FILING DATE: 1998-08-13

PRIOR APPLICATION NUMBER: US 60/055,778

PRIOR APPLICATION NUMBER: US 60/055,778

PRIOR APPLICATION NUMBER: US 60/055,778

SPIOR FILING DATE: 1997-08-15

NUMBER OF SEQ ID NOS: 6812

SOFTWARE PATENTING DATE: 1377

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Sequence 43223, Application US/09270767
Patent No. 6703491
GENERAL INFORMATION:
APPLICANT: Homburger et al.
TITLE OF INVENTION: Nucleic acids and proteins of Drosophila melanogaster
FILE REFERENCE: File Reference: 7326-094
CURRENT APPLICATION NUMBER: US/09/270,767
                                                                                                                                                                                                                      APPLICANT: Tjian, Robert
APPLICANT: Comai, Lucio
APPLICANT: Dynlact, Brian D.
APPLICANT: Huppert, Brian D.
APPLICANT: Huppert, Siegfried
APPLICANT: Ruppert, Siegfried
APPLICANT: Tanese, Naoko
APPLICANT: Tanese, Naoko
APPLICANT: Tanese, Naoko
APPLICANT: Tanese, Naoko
APPLICANT: Weinzierl, Robert O.J.
TITLE OF INVENTION: NUCLEIC ACIDS ENCODING TAFS AND METHODS OF USE
NUMBER OF SEQUENCES: 36
CORRESPONDENCE ADDRESS:

A; Description: catalyzes the formation of specific peptidyl-threonine-phosphate and pept A; Description: catalyzes the formation of specific peptidyl-threonine-phosphate and pept A; Pathway: MAP kinase cascade
C; Superfamaliy: protein kinase A-raf; protein; phosphorotein; phosphorransferase; proto-oncogenc P; 139-184/Domain: protein kinase C zinc-binding repeat homology «KZN»
F; 135-184/Domain: protein kinase C zinc-binding repeat homology «KZN»
F; 135-362/Region: protein kinase APP-binding motif F; 139-165, 168, 184/Binding site: phosphate (Ser) (Covalent) #status experimental
F; 139, 165, 168, 184/Binding site: zinc (His, Cys, Cys, His, Cys) #status predicted
F; 139, 165, 176/Binding site: zinc (Cys, Cys, His, Cys) #status predicted
F; 159, 165, 176/Binding site: phosphate (Thr) (covalent) (by protein kinase C) #status experimental
F; 168, 188, Binding site: phosphate (Ser) (covalent) (by autophosphorylation) #status experimental
F; 1899/Binding site: phosphate (Ser) (covalent) (by protein kinase C) #status predicted
F; 1899/Binding site: phosphate (Ser) (covalent) (by protein kinase C) #status predicted
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         protein kinase raf-1 (BC 2.7.1.-) - rat
N;Alternate names: kinase-related transforming protein raf-1; raf-1 proto-oncogene prote
C;Species: Rattus norvegicus (Norway rat)
C;Date: 31-Mar-1989 #sequence_revision 31-Mar-1989 #text_change 09-Jul-2004
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Residues: 1-648 <1SH>

protein kinase raf-1 (EC 2.7.1.-) - African clawed frog
M.Alternate names: Kinase-related transforming protein raf-1; raf-1 proto-oncogene prote
C;Species: Xenopus laevis (African clawed frog)
C;Date: 30-Jun-1991 #sequence_revision 30-Jun-1991 #text_change 09-Jul-2004
C;Accession: 801930; ISI254
R;le Guellec, R.; le Guellec, K.; Paris, J.; Philippe, M.

MA common onc gene sequence transduced by avian carcinoma virus MH2
"A common onc gene sequence transduced by avian carcinoma virus MH2
and by murine sarcoma virus 3611.";
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         polyprotein. SIMILARITY: Belongs to the Ser/Thr protein kinase family. RAF
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     -!- CATALYTIC ACTIVITY: ATP + a protein = ADP + a phosphoprotein.
-!- MISCELLANEOUS: This protein is synthesized as a Gag-Raf
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              .;

"Nucleotide sequence of avian carcinoma virus MH2: two potential onc
genes, one related to avian virus MC29 and the other related to murine
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    -!- FUNCTION: By itself the v-Mil oncogene has only weak transforming capacity but it abolishes the growth factor requirements of avian macrophages transformed by other oncogenes.
-!- CATALYTIC ACTIVITY: A protein = ADP + a phosphoprotein.
-!- MISCELLANEOUS: This protein is synthesized as a Gag-Mht or Gag-Mil
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         "Nucleotide sequence of avian retroviral oncogene v-mil: homologue of

Assaying a human endogenous protein (e.g. IgB, nerve growth factor, insulin or adenosine deaminase or myoglobin), useful for diagnosing e.g. asthma or diabetes, by employing an ELISA on a saliva sample from a patient.

Claim 7; Page 4; 24pp; English.

The sequences given in ABB80222-28 represent lethal toxin neutralising factor (LTNF) peptides which may be used for reducing elevated levels of serum proteins selected from immunoglobulin E (IgE), nerve growth factor (NGF), insulin, myoglobin and/or adenosine deaminase (ADA). In particular, the methods of the invention are useful for diagnosing and treating conditions with elevated serum IgE levels, e.g. asthma, diabetes, autoimmune disease (e.g. erythematosus (SLE), rheumatoid

```
arthritis, Sjogren's syndrome, Reiter's syndrome, Graves' disease, Addison's disease or Hodgkin's disease) or depression. The efficacy of the protein may be monitored by assaying a human endogenous protein by performing an enzyme-linked immunosorbent assay (ELISA) on a saliva sample using an anti-serum that is specific for the protein. Saliva collection is relatively non-invasive when compared to blood collection of serum. Saliva can be centrifuged immediately, whereas blood requires clotting time before centrifugation to separate serum. Saliva proteins can be assayed by a simple ELISA test, whereas an assay of proteins serum requires a more complicated sandwich type ELISA

e. Assaying a human endogenous protein (e.g. IgE, nerve growth factor, insulin or adenosine deaminase or myoglobin), useful for diagnosing asthma or diabetes, by employing an ELISA on a saliva sample from a patient

Claim 7; Page 4; 24pp; English.

The sequences given in ABB8022-28 represent lethal toxin neutralising factor (LTNF) peptides which may be used for reducing elevated levels of serum proteins selected from immunoglobulin E (IgE), nerve growth factor (NGF), insulin, myoglobin and/or adenosine deaminase (ADA). In particular, the methods of the invention are useful for diagnosing and treating conditions with elevated serum IgE levels, e.g. asthma, diabetes, autoimmune disease (e.g. erythematosus (SLE), rheumatoid arthritis, Sjogren's syndrome, Reiter's syndrome, Graves' disease, Addison's disease or Hodgkin's disease) or depression. The efficacy of the protein may be monitored by assaying a human endogenous protein by

It is a Lethal Toxin Neutralising Factor (LTNF) moiety from a 68 kDa anti-haemorrhagic protein derived from an opossum. The peptide can be used in a method for treating a victim of envenometion from a poisonous snake, preferably a poisonous snake from the family of Elapidae, Viperidae or sea snake. It is useful for the treatment of snake bites, sepsis, allergies caused by the environment and treatment of be or scorpion stings or toxicities caused by plant or bacterial toxins. The peptide can also be used in histamine reaction treatment. The peptide can be used in envenomation treatment for a variety of snakes without prior identification of the snake. Being short it can be synthetically prepared rather than the current production in horses, where some people can show hypersensitivity
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         LTNF; lethal toxin neutralising factor; opossum; envenomation; therapy; anti-haemorrhagic protein; Elapidae; Viperidae; sea snake; snake bite; sepsis; allergy; bee sting; scorpion sting; plant toxin; bacterial toxin;
performing an enzyme-linked immunosorbent assay (BLISA) on a saliva sample using an anti-serum that is specific for the protein. Saliva collection is relatively non-invasive when compared to blood collection for serum. Saliva can be centrifuged immediately, whereas blood requires clotting time before centrifugation to separate serum. Saliva proteins can be assayed by a simple ELISA test, whereas an assay of proteins serum requires a more complicated sandwich type BLISA
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Lethal Toxin Neutralising Factor peptide from opossum - can neutralise venom(s) from all major families of poisonous snakes.

The sequences given in ABB80222-28 represent lethal toxin neutralising factor (LTMP) peptides which may be used for reducing elevated levels of serum proteins selected from immunoglobulin E (IgE), nerve growth factor (NGF), insulin, myoglobin and/or adenobiles (ADA). In particular, the methods of the invention are useful for diagnosing and treating conditions with elevated serum IgE levels, e.g. asthma, diabetes, autoimmune disease (e.g. erythematosus (SLE), rheumatoid arthritis, Sjogren's syndrome, Reiter's syndrome, Graves' disease, atthritis, Siogren's syndrome, Reiter's syndrome, Graves' disease, the protein may be monitored by assaying a human endogenous protein by performing an enzyme-linked immunosorbent assay (ELISA) on a saliva canfine lesing an anti-serum that is specific for the protein. Saliva can be centrifiged immediately, whereas blood requires

The sequences given in ABB80222-28 represent lethal toxin neutralising factor (LTNF) peptides which may be used for reducing elevated levels of serum proteins selected from immunoglobulin B (IgB), nerve growth factor (NGF), insulin, myoglobin and/or adenosine deaminase (ADA). In particular, the methods of the invention are useful for diagnosing and treating conditions with elevated serum IgB levels, e.g. asthma, c.g. diabetes, autoimmune disease (e.g. erythematosus (SLB), rheumatoid arthritis, Sjogren's syndrome, Reiter's syndrome, Graves' disease.

Addison's disease or Hodgkin's disease) or depression. The efficacy of the protein may be monitored by assaying a human endogenous protein by performing an enzyme dimmunosorbent assay (ELISA) on a saliva sample using an anti-serum that is specific for the protein. Saliva collection is relatively non-invasive when compared to blood collection collection are the protein and protein and

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             clotting time before centrifugation to separate serum. Saliva proteins can be assayed by a simple ELISA test, whereas an assay of proteins from serum requires a more complicated sandwich type ELISA
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 e.g.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Assaying a human endogenous protein (e.g. IgE, nerve growth factor, insulin or adenosine deaminase or myoglobin), useful for diagnosing asthma or diabetes, by employing an ELISA on a saliva sample from a

```
The sequences given in ABB80222-28 represent lethal toxin neutralising factor (LTMP) peptides which may be used for reducing elevated levels of serum proteins selected from immunoglobulin E (IgE), insulin, myoglobin and/or adenosine deaminase (ADA). In particular, the methods of the invention are useful for diagnosing and treating conditions with elevated serum IgE levels, e.g. asthma, diabetes, autoimmune disease (e.g. erythematosus (SLE), rheumatoid arthitis, Sjogren's syndrome, Reiter's syndrome, Graves' disease, Addison's disease, or depression; The efficacy of the protein may be monitored by assaying a human endogenous protein by performing an enzyme-linked immunosorbent assay (ELISA) on a saliva collection is relatively non-invasive when compared to blood collection for serum. Saliva can be centrifuged immediately, whereas blood requires collecting time before centrifugation to separate serum. Saliva proteins can be assayed by a simple ELISA test, whereas an assay of proteins from serum requires a more complicated sandwich type ELISA
                                                                                                                                                                                                                                         Lethal toxin neutralising factor; LTNF; serum protein; immunoglobulin E; IgE; nerve growth factor; NGF; insulin; myoglobin; adenosine deaminase; ADA; asthma; diabetes; autoimmune disease; systemic lupus erythematosus; SLE; rheumatoid arthritis; Sjogren's syndrome; Reiter's syndrome; Graves' disease; Addison's disease; Hodgkin's disease; depression; saliva; ELISA.

The present sequence is from the N-terminus of a 68 kD protein purified from the serum of the opossum Didelphis virginiana. The full-length protein is a lethal toxin neutralising factor (LTNF). The use of purified LTMF or of the chemically synthesised 15mer N-terminal peptide for treating victims of bee stings, scorpion stings and bacterial or plant toxins is claimed. The patent disclosure does not provide any evidence for neutralising activity against these various toxins. There is evidence of significant neutralising activity of the opossum LTMF and the 15mer peptide against venom from snakes of the families Crotalidae, Blaphidae, Hydrolidae and Viperidae. (Updated on 25-MAR-2003 to correct PF field.)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     LTNF; lethal toxin neutralising factor; opossum; envenomation; therapy; anti-haemorrhagic protein; Blapidae; Viperidae; sea snake; snake bite; sepsis; allergy; bee sting; scorpion sting; plant toxin; bacterial toxin; histamine reaction treatment.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ö
                                                                                                                                                                                                                                                                                                                                                               This sequence represents the peptide of the invention. It is a Lethal Toxin Neutralising Factor (LTNP) moiety from a 68 kba anti-haemorrhagic protein derived from an opossum. The peptide can be used in a method for treating a victim of envenomation from a poisonous snake, preferably a poisonous snake from the family of Blapidae, Viperidae or sea snake. It is useful for the treatment of snake bites, sepsis, allergies caused by the environment and treatment of be or scorpion stings or toxicities caused by plant or bacterial toxins. The peptide can also be used in histamine reaction treatment. The peptide can be used in envenomation treatment for a variety of snakes without prior identification of the snake. Being short it can be synthetically prepared rather than the current production in horses, where some people can show hypersensitivity
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Lethal toxin neutralising factor; LTNF; serum protein; immunoglobulin E; 1GE; nerve growth factor; NGF; insulin; myoglobin; adenosine deaminase; ADA; asthma; diabetes; autoimmune disease; systemic lupus erythematosus; SLE; rheumatoid arthritis; Sjogren's syndrome; Reiter's syndrome; Graves' disease; Addison's disease; Hodgkin's disease; depression;

The sequences given in ABB80222-28 represent lethal toxin neutralising factor (LTMF) peptides which may be used for reducing elevated levels of serum proteins selected from immunoglobulin B (IgB), nerve growth factor (MGF), insulin, myoglobin and/or adenosine deaminase (ADA). In particular, the methods of the invention are useful for diagnosing and treating conditions with elevated serum IgE levels, e.g. asthma, diabetes, autoimmune disease (e.g. erythematosus (SLB), rheumatoid arthritis, Sjogren's syndrome, Reiter's syndrome, Graves' disease, the protein may be monitored by assaying a human endogenous protein by performing an enzyme-linked immunosorbent assay (ELISA) on a saliva sample using an anti-serum that is specific for the protein. Saliva collection is relatively non-invasive when compared to blood collection for serum. Saliva centralinged immediately, whereas blood requires clotting time before centrifugation to separate serum. Saliva proteins
                                                                  e.

Sequences ANY43902-Y44015 represent proteins used in a novel method of predicting the folded structure of proteins, by aligning sequences of homologous proteins and using patterns of evolutionarily conserved and varied sequences to assign positions. Positions in the alignment are assigned to the surface or inside of the folded structure, active sites, and parsing segments. Secondary structural units are assigned by identifying periodicity in the assignments, and assembled into globular form using distance constraints imposed by disulfide bridges, active site assignments and co-variation analysis. The predicted secondary structures are useful for identifying antigenic sites on a protein molecule, as interaction of a protein with other molecules

                                                                                                                                                                                                                                                               엄
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             ઠે
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    셤
                                                                                                                                                                                                                                                                                                                                                                                                   ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The invention relates to human polynucleotides (AAI79941-AAI93841) and the encoded proteins (AA000010-AA013910) that exhibit activity elating to cytokine, cell proliferation or cell differentiation or which may induce production of other cytokines in other cell populations. The polynpeptides are useful in gene therapy, vaccines or peptide therapy. The polypeptides are useful in gene therapy, vaccines or peptide therapy. The polypeptides have various cytokine-like activities, e.g. stem cell growth factor activity, haematopoiesis regulating activity, tissue growth factor activity, immunomodulatory activity and activin/inhibin activity and may be useful in the diagnosis and/or treatment of cancer, leukaemia, nervous system disorders, arthritis and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Isolated nucleic acids and polypeptides, useful for preventing diagnosing and treating e.g. leukemia, inflammation and immune disorders.
                                                                                                                                                                                                    One of 3 c-raf-1-related peptides
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Human; cytokine; cell proliferation; cell differentiation; gene therapy; vaccine; peptide therapy; stem cell growth factor; haematopoiesis; tissue growth factor; immunomodulatory; cancer; leukaemia; nervous system disorders; arthritis; inflammation.
                                                                                    New oncogene related peptide(s) - useful in prepn. of antigen and then antibodies having specific reactivity with cancer proteins.
                                                                                                                                                                                                                        among 23 claimed oncogene-related peptides.                                                                                                                                                                                                                                                                                                                                                                                                         The present sequence is that of protein c-Raf-1 (amino acids 305-648). Human papillomavirus oncoprotein B7 abrogates Raf-associated arrest and prevents inhibition of cyclin E-CDK2 activity without disrupting Raf induction of p21Cip21. B7 neither interacts with p21Cip1 nor derepresses p21Cip1-associated CDK2 activity, but instead reduces the association between p21Cip1 and cyclin E-CDK2 complexes. Raf down-regulates steadystate levels of Akt, a regulator of p21Cip1 localisation, leading to loss of p21Cip1 phosphorylation and accumulation of p21Cip1. B7 disrupts the effects of Raf on Akt activity and prevents p21Cip1 nuclear accumulation. Maintenance of Akt activity is necessary and sufficient to bypass Raf arrest. The invention provides methods for identifying and using inhibitors of B7 cell proliferation activity, and for identifying and using unhibitors of B7 cell proliferation activity, and for identifying and using the methods can be used to inhibit aberrant cellular proliferation for
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ö
                                                                                                                                                                                                                                                                                                                            Identifying a compound that inhibits B7 cellular proliferation activity by administering a compound to a system, where the system maintains Akt activity and selecting a compound that decreases the amount of Akt

New nucleic acid encoding a Klebsiella pneumoniae polypeptide, useful for preparing a vaccine composition against Klebsiella pneumoniae.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The invention describes a new isolated nucleic acid encoding a Klebsiella
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   pneumoniae polypeptide. Also described are: a recombinant expression vector comprising the nucleic acid, operably linked to a transcription regularory element; and a cell comprising the recombinant expression vector. The nucleic acid is useful for preparing a vaccine composition against Klebsiella pneumoniae. This is the amino acid sequence of a Klebsiella pneumoniae polypeptide of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Human; enzyme; kinase and phosphatase; KPP; cancer; cirrhosis; cell proliferative disorder; arteriosclerosis; atherosclerosis; procythamia to accordance in the semalatis; polycythamia vera; psoriasis; primary thromobocytopaenia; developmental disorder; renal tubular acidosis; anental retardation; AIDS; epilepsy; neurological disorder; Alzheimer's disease; Parkinson's disease; autoimmune disorder; inflammatory disorder; allergy; asthma; acquired immunodeficiency syndrome, autoimmune thyroiditis; contact dermatitis; Crohn's disease; diabetes mellitus; glomerulonephritis; Goodpasture's syndrome; gout; Graves' disease; glomerulonephritis; Goodpasture's syndrome; multiple sclerosis; osteoprosals; panceathis; Reiter's syndrome; rheumatoid arthritis; Sjogren's syndrome; uveitis; infection.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Human kinase and phosphatase protein, KPP-3, INCYTE No.6464221CD1

```

```
The invention relates to an isolated polypeptide, which is a human kinase and phosphatase, KPP (KPP-1 to KPP-1B). Also included are the encoding polymuclectides KPP NA, recombinant polymuclectide comprising a promoter sequence operably linked to KPP NA, a cell transformed with the
                                                                                                                                                                                                                          New human kinases and phosphatases and polynucleotides, useful for diagnosing, treating or preventing autoimmune or inflammatory disorders (e.g. AIDS, allergy or anemia), multiple sclerosis, osteoarthritis, cancer or hepatitis.
                                                                                                                                                                                                                                                                                Claim 1; Page 159-160; 199pp; English.

recombinant polynucleotide, a transgenic organism comprising the recombinant polynucleotide, an anti-KPP antibody, screening for anti-KPP antibody, screening for anti-KPP antibody, screening for cantidonists of KRP, screening for compounds which bind to or alter the activity or expression of KPP, microarray where at least one element is KPP NA, generating an expression profile of a sample containing for capturity or expression of KPP, microarray where at least one element is polymucleotides and an array comprising different nucleotide molecules affixed in distinct physical locations on a solid substrate (where at least one of the nucleotide molecules comprises a first oligonucleotide or polymucleotides of a target KPP NA). The kinases and phosphatases or plymucleotides, polymucleotides, agonists and antagonists are useful for diagnosing, treating or preventing disorders associated with aberrant expression of KPP, particularly cell proliferative disorders (e.g. arteriosclerosis, atherosclerosis, cirrhosis, hepatitis, paroxysmal concurnal heamoglobinuria, polycythaemia vera, psoriasis, primary thrombocytopaenia or cancer), developmental disorders (renal tubular acidosis, anaemia or mental retadation), neurological disorders (e.g. Alzheimer's disease, parkinson's disease or palleysy), autoimmune (c.g. Alzheimer's disease, parkinson's disease or palleysy), autoimmune (c.g. Alzheimer's disease, parkinson's disease or palleysy), autoimmune (c.g. Alzheimer's disease, disease, parkinson's disease or palleysy), autoimmune (c.g. Alzheimer's disease, disease, disease, date (c.g. AlDS), acquired immunodeficiency syndrome, altergies, asthma, autoimmune thyroiditis, irritable bowel syndrome, disease, disease, Hashimoto's thyroiditis, irritable bowel syndrome, multiple sclerosis, osteoarchritis, Sjogren's syndrome, remarcial disease Hashimoto's thyroiditis, pancreatitis, parcetilal parasitic, protozoan or helminthic infections. They are also useful in the assessment of the effects of exogenic animals to model human disease. T

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Sequence 12, Application US/08909983

Sequence 12, Application:

APPLICANT: Rubin, Gerry M.

APPLICANT: Karim, Felix D.

APPLICANT: Wassarman, David A.

TITLE OF INVENTION: A No. 5747288el Protein Kinase Required for Ras

TITLE OF INVENTION: Signal Transduction

NUMBER OF SEQUENCE: 12

CORRESPONDENCE ADDRESS:

ADDRESSEE: SCIENCE TECHNOLOGY LAW GROUP

STREET: 268 BUSH STREET, SUITE 3200
       Sequence 12, Application US/08909984A

Patent No. 5747275

GENERAL INFORMATION:
APPLICANT: Rubin, Gerry M.
APPLICANT: Chang, Henry C.
APPLICANT: Karim, Felix D.
APPLICANT: Karim, Felix D.
APPLICANT: Wassarman, David A.
TITLE OF INVENTION: A No. 5747275el Protein Kinase Required for Ras TITLE OF INVENTION: Signal Transduction
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  81.4%; Score 35; DB 1; Length 315; 75.0%; Pred.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ö
Sequence 2, Application US/08185282

Sequence 2, Application US/08185282

Patent No. 5618670

GENERAL INFORMATION:

APPLICANT: Storm, Stephen M.

TITLE OF INVENTION: DETECTION METHOD FOR C-RAF-1 GENES

TUMBER OF SEQUENCES: 12

CORRESPONDENCE ADDRESS:

ADDRESSEE: CUSHWAN, DARBY & CUSHWAN

STREET: 1615 L Street, N.W.

CITY: Washington.

STATE: D.C.

COUNTRY: USA

IP OF COUNTRY: USA

COUNTRY: USA

D.C.

COMPUTER READBLE FORM:

MEDIUM TYPE: Floppy disk

COMPUTER: IBM PC compatible

COMPUTER: IBM PC compatible

COMPUTER: IBM PC compatible

COMPUTER: USA

SOFTWARE: Patentin Release #1.0, Version #1.25

CURRENT APPLICATION NUMBER: US/08/185, 282
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Sequence 3, Application US/08185282
